

# Package ‘curatedTCGADData’

November 11, 2025

**Type** Package

**Title** Curated Data from The Cancer Genome Atlas (TCGA) as  
MultiAssayExperiment Objects

**Version** 1.33.0

**Description** This package provides publicly available data from The Cancer Genome Atlas (TCGA) as MultiAssayExperiment objects. MultiAssayExperiment integrates multiple assays (e.g., RNA-seq, copy number, mutation, microRNA, protein, and others) with clinical / pathological data. It also links assay barcodes with patient identifiers, enabling harmonized subsetting of rows (features) and columns (patients / samples) across the entire multi-'omics experiment.

**License** Artistic-2.0

**BugReports** <https://github.com/waldronlab/curatedTCGADData/issues>

**Depends** R (>= 4.5.0), MultiAssayExperiment

**Imports** AnnotationHub, ExperimentHub, HDF5Array, methods, S4Vectors, stats, SummarizedExperiment, utils

**Suggests** BiocStyle, knitr, RaggedExperiment, readr, rmarkdown, TCGAutils, testthat

**VignetteBuilder** knitr

**biocViews** Homo\_sapiens\_Data, ReproducibleResearch, CancerData, ExperimentHub

**Encoding** UTF-8

**RoxygenNote** 7.3.2

**Date** 2024-11-13

**git\_url** <https://git.bioconductor.org/packages/curatedTCGADData>

**git\_branch** devel

**git\_last\_commit** 817f977

**git\_last\_commit\_date** 2025-10-29

**Repository** Bioconductor 3.23

**Date/Publication** 2025-11-11

**Author** Marcel Ramos [aut, cre] (ORCID:

|--------------------------------|
| curatedTCGAData-package        |
| <i>curatedTCGAData-package</i> |

---

Description

The curatedTCGAData package provides a convenient and user-friendly interface for The Cancer Genome Atlas data from the Firehose GDAC Pipeline. Please note that `_most_` of the data from the GDAC Firehose pipeline uses the ‘hg19’ reference genome (except for a few cancers; refer to <https://confluence.broadinstitute.org/display/GDAC/FAQ>).

It is highly recommended to use the ‘TCGAutils’ companion package. It provides convenience functions for manipulating curatedTCGAData objects. See package for more details (<http://bioconductor.org/packages/TCGAutils>).

diseaseCodes

The following are the TCGA disease codes and full names as posted on the official website (<https://gdc.cancer.gov/resources-tcga-users/tcga-code-tables/tcga-study-abbreviations>).

| Study Abbreviation |      | Study Name                   |
|--------------------|------|------------------------------|
| -----              |      |                              |
| 1                  | ACC  | Adrenocortical Carcinoma     |
| 2                  | BLCA | Bladder Urothelial Carcinoma |

|    |      |                                                                  |
|----|------|------------------------------------------------------------------|
| 3  | BRCA | Breast Invasive Carcinoma                                        |
| 4  | CESC | Cervical Squamous Cell Carcinoma And Endocervical Adenocarcinoma |
| 5  | CHOL | Cholangiocarcinoma                                               |
| 6  | CNTL | Controls                                                         |
| 7  | COAD | Colon Adenocarcinoma                                             |

curatedTCGAData

*Create a MultiAssayExperiment from specific assays and cohorts*

---

## Description

curatedTCGAData assembles data on-the-fly from ExperimentHub to provide cohesive [MultiAssayExperiment](#) container objects. All the user has to do is to provide TCGA disease code(s) and assay types. It is highly recommended to use the companion package TCGAutils, developed to work with TCGA data specifically from curatedTCGAData and some flat files.

**Usage**

```
curatedTCGADData(
  diseaseCode = "*",
  assays = "*",
  version,
  dry.run = TRUE,
  verbose = TRUE,
  ...
)
```

**Arguments**

|             |                                                                                                                                                                                                                                                             |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| diseaseCode | character() A vector of TCGA cancer cohort codes (e.g., COAD)                                                                                                                                                                                               |
| assays      | character() A vector of TCGA assays, glob matches allowed; see below for more details                                                                                                                                                                       |
| version     | character(1) One of 1.1.38, 2.0.1, 2.1.0, or 2.1.1 indicating the data version to obtain from ExperimentHub. Version 2.1.1 includes various improvements as well as the addition of the RNASeq2Gene assay and subtype updates. See version section details. |
| dry.run     | logical(1) Whether to return the dataset names before actual download (default TRUE)                                                                                                                                                                        |
| verbose     | logical(1) Whether to show the dataset currently being (down)loaded (default TRUE)                                                                                                                                                                          |
| ...         | Additional arguments passed on to the <a href="#">ExperimentHub</a> constructor                                                                                                                                                                             |

**Details**

This function will check against available resources in ExperimentHub. Only the latest runDate ("2016-01-28") is supported. Use the `dry.run = FALSE` to download remote datasets and build an integrative [MultiAssayExperiment](#) object. For a list of 'diseaseCodes', see the [curatedTCGADData-package](#) help page.

**Value**

a [MultiAssayExperiment](#) of the specified assays and cancer codes or informative data.frame of resources when `dry.run` is TRUE

**Available Assays**

Below is a list of partial ExperimentList assay names and their respective description. These assays can be entered as part of the assays argument in the main function. Partial glob matches are allowed such as: 'CN\*' for "CNASeq", "CNASNP", "CNVSNP" assays. Credit: Ludwig G.

## version

Version 2.1.1 provides a couple of corrections to the colData for ovarian cancer (OV) and skin cancer (SKCM). In these new data, the cancer subtype variables are fully available. One get obtain the mapping of columns to subtypes in the colData with the getSubtypeMap function in TCGAutils.

Version 2.1.0 provides gene-level log2 RPM miRNA expression values for miRNASeqGene data

log2 normalized RSEM for RNASeq2GeneNorm assays. Previously, the data provided were read counts and normalized counts, respectively. See issue [#53 on GitHub](#) for additional details.

The new version 2.0.1 includes various improvements including an additional assay that provides RNASeq2Gene data as RSEM TPM gene expression values (issue #38). Additional changes include genomic information for RaggedExperiment type data objects where '37' is now 'GRCh37' as reported in issue #40. Datasets (e.g., OV, GBM) that contain multiple assays that could be merged are now provided as merged assays (issue #27). We corrected an issue where mRNAArray assays were returning DataFrames instead of matrix type data (issue #31). Version 1.1.38 provides the original run of curatedTCGADData and is provided due to legacy reasons.
