

# Package ‘maplegend’

October 18, 2023

**Title** Legends for Maps

**Version** 0.1.0

**Description** Create legends for maps and other graphics. Thematic maps need to be accompanied by legible legends to be fully comprehensible. This package offers a wide range of legends useful for cartography, some of which may also be useful for other types of graphics.

**License** GPL-3

**Depends** R (>= 3.6.0)

**Imports** graphics, grDevices

**Suggests** tinytest, covr

**Encoding** UTF-8

**RoxygenNote** 7.2.3

**Language** en-US

**URL** <https://github.com/riatelab/maplegend/>

**BugReports** <https://github.com/riatelab/maplegend/issues/>

**NeedsCompilation** no

**Author** Timothée Giraud [cre, aut] (<<https://orcid.org/0000-0002-1932-3323>>)

**Maintainer** Timothée Giraud <[timothee.giraud@cnr.fr](mailto:timothee.giraud@cnr.fr)>

**Repository** CRAN

**Date/Publication** 2023-10-18 14:20:02 UTC

---

**leg***Plot a single map legend*

---

**Description**

Plot different types of legend. The "type" argument defines the legend type. Please note that some arguments are available for all types of legend and some others are only relevant for specific legend types (see Details).

**Usage**

```
leg(  
  type,  
  val,  
  pos = "left",  
  pal = "Inferno",  
  col = "tomato4",  
  inches = 0.3,  
  symbol = "circle",  
  self_adjust = FALSE,  
  lwd = 0.7,  
  border = "#333333",  
  pch = seq_along(val),  
  cex = rep(1, length(val)),  
  title = "Legend Title",  
  title_cex = 0.8 * size,  
  val_cex = 0.6 * size,  
  val_rnd = 0,  
  col_na = "white",  
  cex_na = 1,  
  pch_na = 4,  
  no_data = FALSE,  
  no_data_txt = "No Data",  
  box_border = "#333333",  
  box_cex = c(1, 1),  
  horiz = FALSE,  
  frame_border = fg,  
  frame = FALSE,  
  bg = "#f7f7f7",  
  fg = "#333333",  
  size = 1,  
  return_bbox = FALSE,  
  mar = par("mar"),  
  adj = c(0, 0)  
)
```

**Arguments**

type	type of legend: <ul style="list-style-type: none"> <li>• <b>prop</b> for proportional symbols,</li> <li>• <b>choro</b> for choropleth maps,</li> <li>• <b>cont</b> for continuous maps (e.g. raster),</li> <li>• <b>typo</b> for typology maps,</li> <li>• <b>symb</b> for symbols maps,</li> <li>• <b>prop_line</b> for proportional lines maps,</li> <li>• <b>grad_line</b> for graduated lines maps.</li> </ul>
val	vector of value(s) (for "prop" and "prop_line", at least c(min, max) for "cont"), vector of categories (for "symb" and "typo"), break labels (for "choro" and "grad_line").
pos	position of the legend. It can be one of 'topleft', 'top', 'topright', 'right', 'bottomright', 'bottom', 'bottomleft', 'left', 'interactive' or a vector of two coordinates in map units (c(x, y)).
pal	a color palette name or a vector of colors
col	color of the symbols (for "prop") or color of the lines (for "prop_line" and "grad_line")
inches	size of the largest symbol (radius for circles, half width for squares) in inches
symbol	type of symbols, 'circle' or 'square'
self_adjust	if TRUE values are self-adjusted to keep min, max and intermediate rounded values
lwd	width(s) of the symbols borders (for "prop" and "symb"), width of the largest line (for "prop_line"), vector of line width (for "grad_line")
border	symbol border color(s)
pch	type(s) of the symbols (0:25)
cex	size(s) of the symbols
title	title of the legend
title_cex	size of the legend title
val_cex	size of the values in the legend
val_rnd	number of decimal places of the values in the legend
col_na	color for missing values
cex_na	size of the symbols for missing values
pch_na	type of the symbols for missing values
no_data	if TRUE a "missing value" box is plotted
no_data_txt	label for missing values
box_border	border color of legend boxes
box_cex	width and height size expansion of boxes, (or offset between circles for "prop" legends with horiz = TRUE)
horiz	if TRUE plot an horizontal legend

frame_border	border color of the frame
frame	if TRUE the legend is plotted within a frame
bg	background color of the legend
fg	foreground color of the legend
size	size of the legend; 2 means two times bigger
return_bbox	return only bounding box of the legend. No legend is plotted.
mar	plot margins
adj	adjust the position of the legend in x and y directions.

### Details

Some arguments are available for all types of legend: `val`, `pos`, `title`, `title_cex`, `val_cex`, `frame`, `bg`, `fg`, `size`, `adj`, `return_bbox` and `mar`).

Relevant arguments for each specific legend types:

- `leg(type = "prop", val, inches, symbol, col, lwd, border, val_rnd, self_adjust, horiz)`
- `leg(type = "choro", val, pal, val_rnd, col_na, no_data, no_data_txt, box_border, horiz)`
- `leg(type = "cont", val, pal, val_rnd, col_na, no_data, no_data_txt, box_border, horiz)`
- `leg(type = "typo", val, pal, col_na, no_data, no_data_txt, box_border)`
- `leg(type = "symb", val, pal, pch, cex, lwd, pch_na, cex_na, col_na, no_data, no_data_txt)`
- `leg(type = "prop_line", val, col, lwd, val_rnd)`
- `leg(type = "grad_line", val, col, lwd, val_rnd)`

### Value

No value is returned, a legend is displayed.

### Examples

```
# minimal example
plot.new()
plot.window(xlim = c(0, 1), ylim = c(0, 1), asp = 1)
box()
leg(type = "prop", val = c(10, 50, 100), pos = "topleft")
leg(type = "choro", val = c(10, 20, 30, 40, 50), pos = "bottomleft")
leg(type = "typo", val = c("A", "B", "C"), pos = "top")
leg(type = "symb", val = c("A", "B", "C"), pos = "topright")
leg(type = "prop_line", val = c(5, 50, 100), pos = "bottom", lwd = 20)
leg(
  type = "grad_line", val = c(1, 4, 10, 15), pos = "bottomright",
  lwd = c(1, 5, 10)
)

plot.new()
plot.window(xlim = c(0, 1), ylim = c(0, 1), asp = 1)
leg(type = "prop", val = c(10, 50, 100), pos = "topleft", horiz = TRUE)
```

```

leg(type = "choro", val = c(10, 20, 30, 40, 50), pos = "left", horiz = TRUE)
leg(
  type = "cont", val = c(10, 20, 30, 40, 50), pos = "bottomleft",
  horiz = TRUE
)
leg(
  type = "cont", val = c(10, 20, 30, 40, 50), pos = "topright",
  horiz = FALSE
)
box()

```

```

# full example
plot.new()

)

# Positions
plot.new()
plot.window(xlim = c(0, 1), ylim = c(0, 1), asp = 1)
leg(
  type = "prop", val = c(10, 50, 100), pos = "bottomleft", adj = c(0, 1),
  title = "bottomleft1"
)
leg(
  type = "choro", val = c(10, 50, 100), pos = "bottomright",
  adj = c(0, 2), title = "bottomright2", frame = TRUE
)
leg(
  type = "prop", val = c(10, 50, 100), pos = "topleft",
  adj = c(0, -2), title = "topleft2"
)
box()
mtext(
  text = "A small text on 1 line", side = 1, adj = .01,
  line = -1, cex = .8
)
mtext(
  text = "A small text\non 2 lines", side = 1, adj = .99,
  line = -1, cex = .8
)
mtext(
  text = "A large text on 1 line", side = 3, adj = .01,
  line = -1.5, cex = 1.2
)

```

## Description

Compose a map legend with several elements. The "type" argument defines the legend type. Please note that some arguments are available for all types of legend and some others are only relevant for specific legend types.

## Usage

```
leg_comp(
  leg,
  type,
  val,
  pal = "Inferno",
  col = "tomato4",
  inches = 0.3,
  symbol = "circle",
  self_adjust = FALSE,
  lwd = 0.7,
  border = "#333333",
  pch = 1:seq_along(val),
  cex = rep(1, length(val)),
  title = "Legend Title",
  val_rnd = 0,
  col_na = "white",
  cex_na = 1,
  pch_na = 4,
  no_data = FALSE,
  no_data_txt = "No Data",
  box_border = "333333",
  box_cex = c(1, 1),
  horiz = FALSE
)
```

## Arguments

leg	legend object
type	type of legend: <ul style="list-style-type: none"> <li>• <b>prop</b> for proportional symbols,</li> <li>• <b>choro</b> for choropleth maps,</li> <li>• <b>cont</b> for continuous maps,</li> <li>• <b>typo</b> for typology maps,</li> <li>• <b>symb</b> for symbols maps,</li> <li>• <b>prop_line</b> for proportional lines maps,</li> <li>• <b>grad_line</b> for graduated lines maps.</li> </ul>
val	vector of value(s) (for "prop" and "prop_line", at least c(min, max) for "cont"), vector of categories (for "symb" and "typo"), break labels (for "choro" and "grad_line").

pal	a color palette name or a vector of colors
col	color of the symbols (for "prop") or color of the lines (for "prop_line" and "grad_line")
inches	size of the largest symbol (radius for circles, half width for squares) in inches
symbol	type of symbols, 'circle' or 'square'
self_adjust	if TRUE values are self-adjusted to keep min, max and intermediate rounded values
lwd	width(s) of the symbols borders (for "prop" and "symb"), width of the largest line (for "prop_line"), vector of line width (for "grad_line")
border	symbol border color(s)
pch	type(s) of the symbols (0:25)
cex	size(s) of the symbols
title	title of the legend
val_rnd	number of decimal places of the values in the legend
col_na	color for missing values
cex_na	size of the symbols for missing values
pch_na	type of the symbols for missing values
no_data	if TRUE a "missing value" box is plotted
no_data_txt	label for missing values
box_border	border color of legend boxes
box_cex	width and height size expansion of boxes, (or offset between circles for "prop" legends with horiz = TRUE)
horiz	if TRUE plot an horizontal legend

### Value

A list of legends parameters is returned.

### Examples

```
# minimal example
plot.new()
plot.window(xlim = c(0, 1), ylim = c(0, 1), asp = 1)
box()
leg_comp(type = "prop", val = c(10, 50, 100)) |>
  leg_comp(type = "typo", val = c("A", "B", "C")) |>
  leg_draw()
```

---

`leg_draw`*Plot a composed map legend*

---

**Description**

Draw a map legend with several elements.

**Usage**

```
leg_draw(  
  x,  
  pos = "bottomright",  
  size = 1,  
  bg = "#f7f7f7",  
  fg = "#333333",  
  frame = TRUE,  
  frame_border = fg,  
  title_cex = 0.8 * size,  
  val_cex = 0.6 * size,  
  adj = c(0, 0),  
  mar = par("mar")  
)
```

**Arguments**

<code>x</code>	list of legend parameters
<code>pos</code>	position of the legend. . It can be one of 'topleft', 'topright', 'right', 'bottom-right', 'bottomleft' or 'left',
<code>size</code>	size of the legend; 2 means two times bigger
<code>bg</code>	background color of the legend
<code>fg</code>	foreground color of the legend
<code>frame</code>	if TRUE the legend is plotted within a frame
<code>frame_border</code>	border color of the frame
<code>title_cex</code>	size of the legend title
<code>val_cex</code>	size of the values in the legend
<code>adj</code>	adjust the position of the legend in x and y directions.
<code>mar</code>	plot margins

**Value**

A composed legend is plotted. Nothing is returned.

**Examples**

```
# minimal example
plot.new()
plot.window(xlim = c(0, 1), ylim = c(0, 1), asp = 1)
box()
leg_comp(type = "prop", val = c(10, 50, 100)) |>
  leg_comp(type = "typo", val = c("A", "B", "C")) |>
  leg_draw(pos = "topright", bg = "lightblue")
```
