ZyXEL Prestige P2002 Standard Version

Release 3.60(MD.3)C0

Release Note

Date: May 20, 2005

Supported Platforms:

ZyXEL Prestige P2002

Versions:

Bootbase Version: V1.08 | 04/15/2005 17:12:54

ZyNOS Version: V3.60(MD.3) | 05/11/2005 11:31:38

Notes:

1. Management port is 192.168.5.1.
2. After 3.60(MD.0)a7, all the firmware can't use/download on P2002 C2 hardware.
3. Bootbase version MD1.01/1.02 supports AMD Flash only.
4. Bootbase version MD1.03/1.04/1.05 supports Intel Flash only.
5. Support C3-2 hardware and after, please use f/w after 3.60(MD.0)b4 and Bootbase 1.05. (Intel flash)
6. Bootbase version MD1.06 supports both Flash type (Intel and AMD).
7. Add "Multi-Upload firmware" feature in boottext for OBM version.
8. In log information on eWC, if you set the SIP number more than 28 characters, we use "..." to represent the remainder.
9. Bootbase version MD1.08 supports AMD and Intel Flash.
10. New DSP, Version : Rel 9.1.500.8
11. Support Multiboot client V2
12. Remove T38 Feature.

Known Issues:

1. Management port can't be the same subnet with LAN/WAN IP address.
2. T2 Timer always retry default value 4 seconds. (35)
3. Sometimes Phone port will into error mode with BCS telephone. Reboot can solve the problem.
4. Sometimes upload firmware from eWC fail, because memory is not enough. Upload firmware after reboot, it works.
5. Configuration File Restore function failed by using MAC IE5.2 browser, **if your Configuration is back up by using MAC IE5.2 browser. (MAC IE5.0 is OK.)**
6. We remove CI Command sys->cpu for this moment. Because this CI Command may cause exception during boot initiation process.
7. Disable CID on Calling party, the Called party can't hang up VoIP call.
 1. Disable CID on A.
 2. Make VoIP call from A to B.
 3. B hangup VoIP call.
 4. No busy tone was heard on A.
8. DUT send out "183 session progress" with incorrect codec information in early media scenario. DUT send out 183 with SDP codec = G.711A. However, DUT send early media RTP traffic with G.729.
9. With G.729 -> G.711 codec selection, G3 fax always failed.

ZyXEL Confidential

With G.711 -> G.729 codec selection, G3 fax is OK.

10. Switch from DHCP to PPPoE dynamic mode and PPPoE static mode several times, DUT will not send out SIP registration packet.

Features:

Modifications in V 3.60(MD.3)c0 | May 20, 2005

- 1 Update ROM file (Flash Max/Min Interval to 160/40)
- 2 Update ROM file (Phone 1 and Phone 2 only mapped to SIP 1)
- 3 Change to FCS version

Modifications in V 3.60(MD.3)b7 | May 05, 2005

1 [Bug fixed]

- 1.1 (050328361) There is no help page for call forward function and Call forward Help page is same with Phone book help page. Besides, there is no "MWI" and "Call forward" Help page in SIP advance setting.
- 1.2 (050428386) In eWC, System -> System Name is empty. (F/W (MD.3)b5, System Name is P2002)
- 1.3 (050428388) Please don't show surplus information in source and Destination of Logs. (Replace 0.0.0.0 with blanks)
- 1.4 (050428390) Press reset button about 1 sec that the system don't reboot
- 1.5 (050428461) The default setting "Call-Waiting Reject Time" = 20 (sec) (Now is 0)
- 1.6 (050428463) [Consultative Transfer when C don't response and A cancel] is Fail
 1. A goes offhook A receives dialtone
 2. A dials B B rings, A has ringback
 3. B goes offhook A and B converse
 4. A FLASHES A gets secondary DT, B gets MOH
 5. A dials C, *98# + C phone number, C rings, A has ringback, B has MOH
 6. A FLASHES C in idle state, A and B converse
 7. B goes onhook A in idle state
- 1.7 (050503050) The currently "CDR" logging seems useless. Please remove the selection from eWC log.
- 1.8 (050503054) Default ROM file contain incorrect setting. Default country code is "USA", but dialing mode is "Europe" and codec is "G.711A". It should be changed to match country code. (In default Rom file settings, Country Code set to Default and Dial Method to Europe Type)
- 1.9 (050503057) Call waiting function cause DUT occur abnormal sound.
 1. A call B. A and B in conversation.
 2. C call B. C and B in conversation.
 3. B FLASH several times to switch call from C and A.
 4. C and A sometimes occur abnormal sounds.
- 1.10 (050503061) RTCP should be removed while whole RTCP format in incorrect and not same with standard. (Timestamp)

2 [Enhancement]

- 2.1 Add Call Service Mode in WEB GUI; Phone → Common
- 2.2 Remove Password display in voice config signal display <index> and in voice config signal dump <index>
- 2.3 Update IVR to Standard version.
- 2.4 Add dsp initstatus to show DSP init result.
- 2.5 Reject telnet login before device init finish.
- 2.6 Apply password hidden in SPTGen.
- 2.7 Set hidden in some commands when engineering debug flag is turned off.
- 2.8 Change DSP to newer version : Rel 9.1.500.8
- 2.9 Change Bootbase to MD108.bm
- 2.10 Support Multiboot Client v2.
- 2.11 Support 43 country codes and 1 default.
- 2.12 Change sipserver.net in VoIP settings and add AutoProvision server address to 127.0.0.1
- 2.13 AutoProvision will not run when device reboot if activation flag is inactive. (AutoProvision will base on activation flag to run on each time device restart).

ZyXEL Confidential

- 2.14 Device will automatically refresh and renew IP after WAN is up.
- 2.15 Remove Enable Dial-on-demand and Disable Dial-on-demand from SMT Menu 26 Schedule Setup.

Modifications in V 3.60(MD.3)b6 | April 25, 2005

- 1 [Enhancement]**
 - 1.1 PPP information send to syslog server.
- 2 [050413495][Bug fixed]**
 - 2.1 STUN Function Fail.
- 3 [050413496] [Bug fixed]**
 - The attribute of rom-t file must be hidden.
- 4 [050413498][Bug fixed]**
 - If use PPPoE client, when reboot device, the Management IP Address will be unable to use.
- 5 [Enhancement]**
 - 5.1 Support the outbound proxy at SPTGEN and Auto-Provision.
- 6 [Enhancement]**
 - 6.1 Support to enable and disable the SIP session timer.
- 7 [Enhancement]**
 - 7.1 Enlarge the length of the PPPoE/SIP username to 72. (SMT don't support).
- 8 [Enhancement]**
 - 8.1 USA and Europe dial plan configured.
- 9 [Enhancement]**
 - 9.1 TISP used dial plan.
- 10 [Enhancement]**
 - 10.1 Early media & music on hold can configure and record. (only support by CI command).

Modifications in V 3.60(MD.3)b5 | April 11, 2005

- 1 [50328362][Bug fixed]**
 - 1.1 There is no SIP/RTP/FSM log and some useless log selection appears (etc. TCP reset, packet filter, CDR).
- 2 [50328363][Not Issue]**
 - 2.1 Domain name show invalid name "yyyyy" in default setting. Press "APPLY" button, there will have error message come out.
- 3 [50328364] Bug fixed]**
 - 3.1 Call forward + Call hold cause exception.
 - 1. Set B forward to C.
 - 2. A call B, C ring.
 - 3. C offhook
 - 4. C flashes,
 - 5. C occur exception.
- 4 [50328365][Bug fixed]**
 - 4.1 Call waiting function cause exception.
 - 1. A call B. AB in conversation.
 - 2. C call A.
 - 3. A flashes.
 - 4. A occur exception.
- 5 [50328366][Bug fixed]**
 - 5.1 Congestion tone cause user can't dial peer to peer call. User can't dial peer to peer call after SIP unregistered.
- 6 [50328367][Bug fixed]**
 - 6.1 Consultation transfer always failed.
 - 1. A call B.
 - 2. B offhook, AB in conversation.
 - 3. A dial *1* + C number.

- 4. C can't hear rining.
- 7 [50328368][Bug fixed]
 - 7.1 DUT send out DNS query between 100tring and 180rining.
- 8 [50328370][Bug fixed]
 - 8.1 Before using Early media function, user need to enter IVR and clear all memory. Otherwise, the early media function will cause exception.
- 9 [50328371][Bug fixed]
 - 9.1 Get Rom-t from DUT cause DUT exception.
 - 1. FTP to DUT.
 - 2. Get Rom-t from DUT.
 - 3. DUT occur exception.
- 10 [50328372][Not Issue]
 - 10.1 Min-SE parameter doesn't work.
 - 1. Set Min-SE value in A which larger than B's session timer.
 - 2. B call A.
 - 3. A receive Min-SE but doesn't send Invite with new timer.
- 11 [50329408][Not Issue]
 - 11.1 Call waiting indication only continue for two sounds and Calling party doesn't receive busy tone. Call waiting indication need to continue if calling party is not hang-up. Besides, after CWI sound stops. Calling party didn't receive any sound.
- 12 [50329409][Bug fixed]
 - 12.1 Fill out all characters in Call forward table then eWC show error page.
- 13 [50329410][Bug fixed]
 - 13.1 For "accept" and "block" method in advance call forward table, forward number should be don't need to input. Currently, all field need to be input, otherwise the rule can't be saved.
- 14 [50329411][Bug fixed]
 - 14.1 "No answer" function in advance call forward table doesn't have timeout setting.
- 15 [50329412][Not Issue]
 - 15.1 VoIP call POST dialing delay increase gradually. VoIP call delay become more and more late in every VoIP call.
- 16 [50329413][Not Issue]
 - 16.1 Auto-Firmware upgrade will be failed if auto-provision name is "360MD3b5.bin", and the FTP server's file name is "360MD3B5.bin". Although DUT can locate the file but upgrade will be failed.
- 17 [50329415][Not Issue]
 - 17.1 Speed dial can't work if Auto-Firmware upgrade function is enabled.
- 18 [50329417][Bug fixed]
 - 18.1 Call feature cause DUT occur exception randomly.
- 19 [50330453][Bug fixed]
 - 19.1 After unplug WAN connection during VoIP conversation, DUT can't send to Invite or receive VoIP call.
 - 1. Make VoIP call.
 - 2. Cut off DUT's WAN connection.
 - 3. DUT sometimes can't make or receive VoIP call again.
- 20 [50330454][Not Issue]
 - 20.1 Immediate dial can't work. Enable immediate dial function and dial VoIP number plus pond(#) sign, the VoIP call is still delay few seconds.
- 21 [50330455][Bug fixed]
 - 21.1 PPP information didn't send to syslog server.
- 22 [50330456][Bug fixed]
 - 22.1 Sending log to email function doesn't work by either clicking "send email now" on eWC or by schedule.
- 23 [50330457][Bug fixed]
 - 23.1 Log setting help page appears "ZyAIR" wording.
- 24 [50330458][Not Issue]
 - 24.1 Long term overnight VoIP call failed.

ZyXEL Confidential

1. Make VoIP call.
 2. Wait overnight.
 3. VoIP call was disconnected after overnight test.
- 25 [Enhancement]**
- 25.1 Support Rom-D.
- 26 [Enhancement]**
- 26.1 Support DTMF Call ID.
- 27 [Enhancement]**
- 27.1 Support 3 way conference.

Modifications in V 3.60(MD.3)b4 | March 18, 2005

- 1 [Enhancement]**
- 1.1 **Support DTMF Relay: RFC2833 / SIP INFO / SIP-INFO / SIP-INFO-Link_RFC2833**
 - 1.2 **Support FAX Relay**
 - 1.3 **Support VLAN Tag / DiffServ**
 - 1.4 **Support Point to Point Call**
 - 1.5 **Support STUN**
 - 1.6 **Support Fake IP**
 - 1.7 **Support Sptgen**
 - 1.8 **Support Auto Provision (support TFTP and HTTP)**
 - 1.9 **Support Speed Dial phonebook**
 - 1.10 **Support On-hold & Un-hold**
 - 1.11 **Support Second-Call**
 - 1.12 **Support Call-Waiting**
 - 1.13 **Support Call-Transfer (Blind Transfer / Consultative Transfer)**
 - 1.14 **Support MWI**
 - 1.15 **Support congestion tone**
 - 1.16 **Support IVR**
 - 1.17 **Support Early Media when on-hold (the primary codec should be G.729)**
 - 1.18 **Auto firmware Update**

Modifications in V 3.60(MD.3)b2 | December 16, 2004

- 1 [Bug fixed]**
- 1.1 DNS query failed after auto-provision change the tftp server address to FQDN.
- 2 [Enhancement]**
- 2.1 Support 5 REN.

Modifications in V 3.60(MD.3)b1 | November 24, 2004

- 1 [Bug fixed]**
- 1.1 Callee side fail to hangup peer to peer call on ATA.
 - 1.2 Auto-Provision will disconnect PPPoE or voice connection.
- 2 [Enhancement]**
- 2.1 Support country code (in voip->common) mapping to tone.

Modifications in V 3.60(MD.2)c0 | November 9, 2004

- 1** Change ZyNOS Version from 3.60(MD.2)**b7** to 3.60(MD.2)**c0**

Modifications in V 3.60(MD.2)b7 | November 2, 2004

- 1 [Bug fixed]**
- 1.1 (177)ATA shows menu 98.5, 98.6, 98.7.1, 98.7.2 in incorrect format when getting ATA

ZyXEL Confidential

configuration from SPTGEN.

- 2 **[Enhancement]**.
No enhancement item.

Modifications in V 3.60(MD.2)b6 | November 1, 2004

- 1 **[Bug fixed]**
 - 1.1 (113) Sometimes MGMT port can't be Ping or Managed after boot up ATA without connect LAN port. After reboot, it works.
 - 1.2 ATA occurs console hang up or reboot during stress testing.
 - 1.3 180 ringing delay sending out.
 - 1.4 System crashes if doing Auto-Provision.
 - 1.5 When Off Hook at first ting, users hear Caller-ID sound. Caller-ID can't display on phone 1.
- 2 **[Enhancement]**.
 - 2.1 Add rom-d function for Bluecom.

Modifications in V 3.60(MD.2)b5 | October 12, 2004

- 1 **[Bug fixed]**
 - 1.1 (178)ATA can't accept "OPTION" packet come from Asterisk server.
 - 1.2 (181)ATA could not get SIP account 2 RTP port info from Auto-Provision.
 - 1.3 (182) When clicking restart button on ATA, browser show "your browser can't handle the script....."
 - 1.4 TFTP timeout time always delay 10sec to be executed.
- 2 **[Enhancement]**.
 - 2.1 Add Autoprovision key word display, use "voice autopro dbdisplay" to get the information

Modifications in V 3.60(MD.2)b4 | October 8, 2004

- 1 **[Bug fixed]**
 - 1.1 (162) Phone book entry "Delete" function doesn't work by using MAC IE5.2 browser.
 - 1.2 (163) Configuration File Restore function failed by using MAC IE5.2 browser.
 - 1.3 (178) ATA can't accept "OPTION" packet come from Asterisk server.
 - 1.4 (179) There is no help page for VoIP setting common page.
 - 1.5 (180) There is no Fake IP/ Outbound Proxy /NAT Keep alive on SIP advance setting help page.
 - 1.6 (181) ATA could not get SIP account 2 RTP port info from Auto-Provision.
 - 1.7 Auto-Provision function show inconsistency with eWC SIP parameter value range. Currently Auto-Provision accept old eWC range and can't consistence with eWC acceptable value range.
 - 1.8 By using Windows Messenger or XTEN to call ATA, ATA will not send out "BYE" when Phone is On-Hook.
 - 1.9 ATA use incorrect DNS server to send out DNS query.
- 2 **[Enhancement]**
No enhancement item.

Modifications in V 3.60(MD.2)b3 | October 6, 2004

- 1 **[Bug fixed]**
 - 1.1 (176) Clear button doesn't work in Phone Book page on eWC.
 - 1.2 (177)Set "RTP from" port as "1024" and "RTP to" port as "1025".
 - 1.3 (178)ATA can't accept "OPTION" packet come from Asterisk server.
- 2 **[Enhancement]**
 - 2.1 Remove ZyNOS version in login page.
 - 2.2 Move VoIP->Common to Phone->Common.

Modifications in V 3.60(MD.2)b2 | September 30, 2004

- 1 [Bug fixed]**
 - 1.1 (168) PPPoE/DHCP mode DNS query doesn't work.
 - 1.2 (169) eWC shows improper "Set Pound" wording.
 - 1.3 (171) ATA shows "Error! RTP start port can't large than end port" when user input same value in RTP from and RTP to port.
 - 1.4 (172) ATA allow different port range in RTP port setting and SIP port setting.
 - 1.5 (174) NAT Keep alive value has no default value and allow range specified on eWC.
 - 1.6 (173) Callee side can't terminate VoIP call on ATA.
- 2 [Enhancement]**
 - 2.1 Show ZyNOS version in login page.

Modifications in V 3.60(MD.2)b1 | September 27, 2004

- 1 [Bug fixed]**
 - 1.1 (40) Exception occurs after setting SIP number to "127" character.
 - 1.2 (45) There is no MGMT, ethernet Port and VoIP status Help page in Maintance HELP page
 - 1.3 (47) Exception occurs when DUT1's compression type change to G.729 > G.711, DUT1 dial to DUT2, DUT2 off hook and on hook immediately.
 - 1.4 (32)Back to Factory Default would redirect WEB page to 192.168.1.1
 - 1.5 (37)Non exist "show Statistics" function show in maintenance Help page
"Show Statistics - Click Show Statistics to see router performance statistics such as number of packets sent and number of packets received for each port."
- 2 [Enhancement]**
 - 2.1 Add "Multi-Upload firmware" feature in boottext for OBM version.
 - 2.2 Add outbound proxy support.
 - 2.3 Add "NAT keep alive" function.
 - 2.4 Add phone country code selection.
 - 2.5 Free the RTP port restriction (1025~65535).
 - 2.6 Add Fake WAN address.
 - 2.7 Allow for user to use Peer-to-Peer Call.

Modifications in V 3.60(MD.1)c0 | August 9, 2004

- 1 [Bug fixed]**

No newer bug be fixed.
- 2 [Enhancement]**

No enhancement item.

Modifications in V 3.60(MD.1)b4 | August 6, 2004

- 1 [Bug fixed]**
 - 1.1[Help Page]
 1. No STUN description on help page.
 2. No DTMF function description on help page.
 3. No VAD function description on help page.
 4. No Dialing Interval description on help page.
 - 1.2 When the SIP 1 is not active, SIP 2 can not be register or unregister.
- 2 [Enhancement]**

No enhancement item.

Modifications in V 3.60(MD.1)b3 | August 6, 2004

- 1 [Bug fixed]**

ZyXEL Confidential

- 1.1 Can't get correct rtp port when STUN active.
- 1.2 Remove the help icon from Reg_Fail.html and Reg_Wait.html.
- 2 [Enhancement]**
 - 2.1 The rtpUptime value is zero and caused exception occur when open "Show Statistics" Page on eWC and Make VoIP Call.

Modifications in V 3.60(MD.1)b2 | August 5, 2004

- 1 [Bug fixed]**
 - 1.1 (100)"End of Event" doesn't carrier in last RFC2833 DTMF event's payload.
 - 1.2 (106)ATA send DNS server query every 5 sec after used FQDN name in SIP server address on eWC.
 - 1.3 (134) Online Configuration for PHONE setting on eWC. Volume setting/ VAD/ Echo setting doesn't work.
 - 1.4 (146) Online Configuration for RTP port setting doesn't work
 - 1.5 (147) If invalid(not exist) host was used in primary DNS, DNS query will not work.
 - 1.6 (148) With "PPPoE+Static IP", MGMT port show "0.0.0.0" in maintenance page.
 - 1.7 (149)ATA sometimes doesn't generate Busy tone when receiving 4xx response from proxy server.
 - 1.8 (152) Sometimes ATA hang before "VC-5402 Init" print out. Frequency: two times
 - 1.9 (154)Change SIP local port, eWC maintenance info will not be changed
 - 1.10 (156)By using MAC OS IE5.2 to login ATA's eWC doesn't work.
 - 1.11 (158)Volume control doesn't work. G.711/G.729 codec volume always keep in 14.7/14.3 dB
 - 1.12 P2002 FCS sample (AE) will reboot when init SLIC in low temperature.
- 2 [Enhancement]**
 - 2.1
 - 1. Support that online change STUN server IP
 - 2. When change local IP, we need to unregister rtp port to stun.
 - 3. Replace uint8 to uint16 for port parameter
 - 2.2 Modify for debug tool, show all dlg & tx status.
 - 2.3 Support RFC2833 Like SIP INFO.

Modifications in V 3.60(MD.1)b1 | July 28, 2004

- 1 [Bug fixed]**
 - 1.1 (50) By using G.729 codec to transfer FAX sometimes cause ATA occurs exception.
 - 1.2 (86) ATA occur exception when running CERT SIP test.
 - 1.3 (97) On line modify VoIP setting during VoIP call cause ATA setting change fail for more than 3 minute after hang up PHONE.
 - 1. Access ATA through MGMT port.
 - 2. Initiate VoIP call.
 - 3. Modify VoIP setting (Caller ID, Phone 1/2 check). eWC will show setting failed due to VoIP call is running.
 - 4. Hang up PHONE. VoIP setting will always failed for a period of time.
 - ~~1.4 (106) ATA send DNS server query every 5 sec after used FQDN name in SIP server address on eWC.~~
 - 1.5 (116)Configure ATA to use PPPoE+Static IP through MGMT port on eWC. Reboot ATA, then Static IP's subnet Mask or Default gateway will become "0.0.0.0".
 - 1.6 (118) Phone Book] SIP number's MAX characters is 31. It's too short for most SIP URI case. Suggest: 64 characters. Now is 127 character.
 - 1.7 (123)After restart ATA and the time setting become default value.
 - 1. Set Time protocol to NONE.
 - 2. Set Current Time.
 - 3. Restart ATA
 - 1.8 (124)When the sip is registered ,then disconnect the WAN cable,the PWR/VoIP light is still show sip connect. (show orange color not green)

ZyXEL Confidential

- 1.9 (128)With default Volume setting, Echo and background noise are noticeable. Expect: Lower default volume setting.
 - 1.10 (129)Log show incorrect "SIP registration" log entry.
 - 1. Press "unregistered" on eWC Maintenance page.
 - 2. Check Log. Log show two entry, one is "SIP unregistration success". One is "SIP registration success. But the registration is not show success on Maintenance page.
 - 1.11 (131)Phone Book show each empty as "jK". Expect: change to "NULL" character
 - 1.12 (132)SIP Password 19 character is too short for some beta tester's ISP.
 - ~~1.13 (134)Online Configuration for PHONE setting on eWC. Volume setting/ VAD/ Echo setting doesn't work.~~
 - 1.14 (135)VoIP call GOS(Grade of Loss) issue by measuring with Radcom
 - 1.15 (136)When register fail and eWC show " The registration has failed. Please return to the previous page. Click Help for more information. Click Help page But show no help page.
 - 1.16 (137)Key in wrong SIP username and Password then make register failed. Key in correct one and press register on eWC. The registration will always failed.
 - 1.17 (141)Disable SIP 1 account and register SIP 1 account on eWC. Then enable SIP 1 account again. SIP 1 will not be able to register unless reboot ATA.
 - 1.18 (142)By default ROM file, Ethernet Subnet/Default Gateway field on eWC is not grey out.
 - 1.19 (143)[Help Page] No SIP/RTP priority setting and Dialing interval description in help page.
 - 1.20 (144)Incorrect RTP port was used "50004". eWC setting From RTP port "50000"
 - 1.21 IAD show "VC5402 init error" in console when IAD was restarted during VoIP communication.
 - 1. IAD <--> LAN <--> IAD
 - 2. Initiate VoIP call
 - 3. Restart IAD through eWC.
 - 4. IAD sometimes generate noise sound when "VC5402 init error" shown.
 - 5. IAD needs to be restarted again in order to recover.
 - 1.22 After turn on VAD, the VoIP communication appear stop for a short period of time then continue. Default Volume setting.
- 2 [Enhancement]**
- 2.1 Update Bootbase to v1.06 for the dual flash support. Now v1.06 can support Intel/AMD Flash type.
 - 2.2 Auto-provision/Auto-firmware upgrade by TFTP

Modifications in V 3.60(MD.0)b7 | July 15, 2004

1 [Bug fixed]

- 2.3 G.711u/G.729 VoIP conversation delay variance => 10ms+/-6, Expect => 10ms+/-1. Have been fixed in previous version.
- 2.4 [Help Page on eWC]
 - 2.4.1 Incorrect System DNS server on System/General Help page.
 - 2.4.2 No Ethernet and Log help page.
 - 2.4.3 Statistics help page appear on help page but no Statistics function appear.
- 2.5 By default rom file, eWC show SIP account 2 as registration failed. Expect: Not register
- 2.6 ATA should play "busy tone" when ATA receive SIP 488 not acceptable packet.1. Set two ATA with different code.2. Initiate VoIP call.3. ATA will receive 488 not acceptable but doesn't generate busy tone. Have been fixed in previous version.
- 2.7 Set "space" in SIP number on Speed dial Phone book, but the entry could not be used to dial out. Not a problem.
- 2.8 WAN to LAN VoIP call drop after 3 minutes in STUN scenario.
 - 2.8.1 Topology:P2002(Caller) <--- ZyWALL --> P2002 (Callee) with STUN enabled.
 - 2.8.2 Initiate VoIP call from Caller to Callee.
 - 2.8.3 Wait 3 minutes and the VoIP call was dropped.
- 2.9 No STUN keep-alive interval function implemented. The STUN keep-alive interval value will be changed automatically.
- 2.10 [Phone Book] SIP number's MAX character is 31. It's too short for most SIP URI case.

ZyXEL Confidential

- 2.10.1 Suggest: 64 characters.
- 2.10.2 Have been update eWC to 128 characters.
- 2.11 [Help Page on eWC] Chang the all words "ZyAIR" to "ATA"
- 2.12 [Help Page on eWC] No PHONE BOOK help page.
- 2.13 SIP Password 19 character is too short for some beta tester's ISP. Have been extended to 96 characters.
- 2.14 Online Configuration for PHONE setting->Out-Going Call mapping to SIP only on eWC

Modifications in V 3.60(MD.0)b6 | July 11, 2004

3 [Bug fixed]

- 3.1 (79)ATA occur exception when suddently off-on-hook
 - 1. Caller <--> ATA(1) <--Internet--> ATA(2) <--> Callee
Caller side make VoIP call to Callee side.
 - 2. Callee side Rining.
 - 3. Make Callee side Off hook and on hook quickly.
 - 4. Callee side ATA occur exception.
- 3.2 (83)Create Many call by using Prolab at the same time, ATA will occur exception.
- 3.3 (103)[eWC] By default rom file, eWC show SIP account 2 as registration failed. Expect: Not register.
- 3.4 (104)[eWC] Two G.168 active selections.
- 3.5 (105)re-Invite by 302_move_temporary, callee side can't hang up.
 - Topology: P2002 (Caller) <--> LAN <--> P2002 (redirect)
 - 1. Caller call Callee and proxy redirect to P2002 (redirect).
 - 2. P2002 (redirect) answers the phone then hangs up.
 - 3. P2002 (Caller) would not hear BUSY tone.
- 3.6 (108)ATA occur exception after Overnight VoIP reliability test.
 - 1. P2002 <--> LAN <--> P2002
 - 2. Initiate dual channel VoIP call.
 - 3. Run for overnight test.
- 3.7 (109)[eWC] Phone book -> SIP number, Name, Non-Proxy doesn't start from first character when user inputted on eWC.
- 3.8 (111)RTP/SIP ToS range incorrectly limited to ""0~5"" on CI command. Expect: 0~7.
- 3.9 (117)[eWC][Phone Book] Add two speed dial entries with MAX characters in SIP number and name field. The first entry's name field will include and overlap with second entry's name.
- 3.10 (119)[eWC][Phone Book] Edit a "use proxy" speed dial entry, the entry will show as "non-proxy" type.
- 3.11 (120)[eWC][Phone Book] Fill in MAX characters in name field and Add the entry. Then edit the entry and check "Name" field. The last character will show one more "space" character.
- 3.12 (121)[eWC][Phone Book] Fill in MAX characters in SIP number, name and input non-proxy IP. Then edit the entry. Problem: The ""Non-proxy IP"" will show in ""Name"" field.
- 3.13 (122)[eWC][Phone Book] Fill in MAX characters in SIP number, name and input non-proxy IP in entry "#10". The entry will can't be deleted unless press "Clear Phone Book" button.
- 3.14 (128)ATA doesn't generate sip log and rtp log
- 3.15 (128)With default Volume setting, Echo and background noise are noticeable. Expect: Lower default volume setting."

4 [Enhancement]

- 4.1 (50)FAX Relay. By using G.729 codec to transfer FAX always fail. Default codec is G.729 -> G.711.
- 4.2 (82)Transfer FAX in one channel will affect another channel to drop VoIP communication when FAX tranfer is completed.
 - Procedure:
 - 1. Switch both channels to G.711.
 - 2. Make VoIP communication in channel 1.
 - 3. Transfer FAX (5 pages) in another channel.

ZyXEL Confidential

4. When FAX machine is completed, sometimes the VoIP communication was also dropped.
- 4.3 SIP number's MAX character is 31. It's too short for most SIP URI case. Extend to 95 characters. (CI command only, eWC will be next version.)
- 4.4 Add Country option in VOIP->Common group.
- 4.5 Support privacy call (including RFC3325 and call draft). Add CI command let RFC3325 and call draft adjustable.
- 4.6 Add Ring Timeout Timer = 180 seconds. Ring timer would fire once ringing. If timeout then terminate itself and send 486(Request Terminated) out to terminate the caller.
- 4.7 Don't care SIP Packet when all headers are un-known.
- 4.8 Support on-line configuration for phone. (CI command)
- 5 **[VoIP SIP Interoperability]**
 - 5.1 Can't interoperate with telia softphone through telia sip server which support TCP & UDP.
 - 5.2 IPTEL SIP server.

Modifications in V 3.60(MD.0)b5 | July 1, 2004

- 1 **[Bug fixed]**
 - 1.1 ATA occur exception when receive 302 – Move Temporary.
 - 1.2 ATA occur exception when receiving SIP REFER packet.
 - 1.3 [eWC] ATA occur exception when open eWC->Maintenance page will cause system exception.
 - 1.4 ATA should not send out SIP invite with itself SIP Phone number.
 - 1.5 [eWC] VoIP -> SIP server address / Register server address should accept FQDN format address.
 - 1.6 Wrong DTFM signaling bits is carried in INFO packets. Only 1~6 work correct.
 - 1.7 [eWC] Default URL type should be "SIP" not "TEL". After enter "SIP advance setting page", the URL setting was changed to URL:TEL and can't be changed back unless changed in CI command. It caused VoIP call always failed.
 - 1.8 [eWC] Online configuration didn't work for SIP account configuration page setting.
 - 1.9 [eWC] Change SIP local Port to port 5070, VoIP status on Maintenance menu still show UDP/5060 port
 - 1.10 [eWC] Use eWC to configure device to PPPoE mode and reboot. SMT show "ip alias enif1 FAIL iface enif1:0 not available" and Management port failed to access.
 - 1.11 [Romfile] Change default setting to "G.711 > G.729" from "G.729 > G.711", default codec will use G.711.
 - 1.12 [eWC] Hide VoIP->Advanced->T2 Timer for the T2 Timer can't configure problem.
 - 1.13 When STUN active, RTP port is still local port not WAN port.
 - 1.14 SIP1 call SIP2 in the same device, callee will auto send out BYE SIP message.
 - 1.15 Different Codec can communicate. Test result: ATA1 set G.711 only. ATA2 set G.729. ATA1 can make call each other.
 - 1.16 Update Bootbase to version 1.05 to the default WP OFF on Intel flash.
- 2 **[Enhancement]**
 - 2.1 [eWC] Add Active option to VOIP->SIP page.
 - 2.2 Pass CERT test.
 - 2.3 Play out DTMF tone after receive "SIP INFO" packet.
 - 2.4 Support SIP ONHOLD/UNHOLD:
 - 2.5 Set destination IP to 0.0.0.0 for RTP packet when receiving SIP ONHOLD request, and set back to non-zero IP when receiving SIP UNHOLD request.
 - 2.6 Free RTP packets if the destination IP is zero.
 - 2.7 Change volume control by SLIC to DSP. The range will change to -14 to 14 from 1 to 5. In eWC, 1 means -14 and 5 means 14.
 - 2.8 Support different TOS setting in RTP and SIP packet. Now only CI command supported. eWC will setup both to the same setting.
 - 2.9 Support Non/Force proxy call.

ZyXEL Confidential

- 2.10 Support RemovePound: Press '#' when inputting dial digit number will make device to make call immediately.
- 2.11 [eWC] Add STUN setup field – Active, Server Address and Server Port in VOIP->Advanced page.
- 2.12 [eWC] Add DTMF Type setup field in VOIP->Advanced page.
- 2.13 Add Phone Book->Speed Dial page for speed dial and non/force proxy call.

3 [VoIP Interoperability]

- 3.1 Windows Messenger.
- 3.2 MWI
- 3.3 ASTERISK
- 3.4 GRANDSTREAM

Modifications in V 3.60(MD.0)b4 | June 4, 2004

1 [Bug fixed]

- 1.1 System logs function doesn't work. (24)
- 1.2 Change Phone to 10/20 pulse dialing mode cause device exception. (48)
- 1.3 Reboot button on eWC sometimes doesn't work.(PPPoE mode) (75)
- 1.4 ATA carry incorrect TOS value. (39)
- 1.5 Sometime ATA doesn't register automatically after boot up. Register manually will be successfully. Happen 2 times / 5 Try. (68)
- 1.6 Dialing interval doesn't work. By default: dialing interval is 3 sec. After 3 seconds timeout, FXS port should send out. (9)
- 1.7 ATA occur exception when using dual channel with long VoIP conversation (two days). (84)
- 1.8 [eWC] Primary and Secondary DNS can't be saved on Web. (26)
- 1.9 [eWC] PPPoE mode unstable and sometimes PPPoE connection drop abnormally. Use eWC to configure device to PPPoE mode will make VOIP call fail after idle timeout. Force eWC configure device to PPPoE mode with Nail-up connection. (91)
- 1.10 Change ATA default session expire time to 180 sec from 1800. (33)
- 1.11 Default RTP from port should be even value. Default value is 49153 on eWC, but ATA use port 49154 as the first channel. (34)
- 1.12 [eWC] Fix eWC->MAINTENANCE page wrong string display.
- 1.13 [eWC] Change SIP local Port to port 5070, VoIP status on Maintenance menu still show UDP/5060 port. (81)
- 1.14 [eWC] Phone 2 voice volume control can't be changed on eWC. (43)
- 1.15 [eWC] Voice volume control function doesn't work. (44)
- 1.16 [eWC] Phone 2 G.168 function can't be activated on eWC. (45)
- 1.17 [eWC] VoIP Setting -> Apply to Phone 1,2 on eWC doesn't work. (29)
- 1.18 [eWC] Didn't check RTP end port must large than start port. (36)
- 1.19 [eWC] Didn't check Voice VLAN ID in the range from 0 to 4024. (65)
- 1.20 [eWC] VoIP -> Advanced -> URL Type setting changed to SIP will save TEL.
- 1.21 [eWC] Phone -> Echo Cancellation enable will make it disable.

2 [Feature]

- 2.1 SDP in ACK.
- 2.2 STUN client.
- 2.3 Respond to OPTION request.
- 2.4 DTMP in INFO message.
- 2.5 RFC 2833 – RTP Payload for DTMF Digits, Telephony Tones and Telephony Signals.
- 2.6 Caller ID support SIP phone call.
- 2.7 Device shouldn't call itself.
- 2.8 [eWC] On line configuration.
 - 2.8.1 User can't save the change in SIP with conversation.
 - 2.8.2 If the SIP is free, the configuration will be saved and active.
- 2.9 [eWC] Add Web VOIP help page.

ZyXEL Confidential

- 2.10 [eWC] Add Outgoing Call use SIP mapping option.
- 3 [VoIP Interoperability] ATA occur exception and reboot when called by XTEN softphone.

Modifications in V 3.60(MD.0)b3 | May 28, 2004

1. This version is for P2002 C3-2 sample production only.
2. Update Bootbase to 1.04 to meet C3-2 hardware with Intel flash.

Modifications in V 3.60(MD.0)b2 | May 25, 2004

1. [Bug FIXED]
Symptom: ATA carry incorrect TOS value.
Procedure:
 1. Input TOS value "7" on eWC.
 2. Measure "0x07" value on RTP traffic in IPv4 TOS field.
 3. Expect: the value should be "0xE0" (BIN:11100000).**Condition:**
2. [Bug FIXED]
Symptom: ATA occur exception when suddently off-on-hook
 1. Caller <--> ATA(1) <--Internet--> ATA(2) <--> Callee
Caller side make VoIP call to Callee side.
 2. Callee side Rining.
 3. Make Callee side Off hook and on hook quickly.
 4. Callee side ATA occur exception.**Condition:**
3. Disable SMT 3 – LAN Setup
4. TE test CI command support unregistered test.
5. Change Phone LED blinking to hardware trigger.
6. Bootbase 1.03 support Intel Flash but AMD Flash.

Modifications in V 3.60(MD.0)b1 | May 4, 2004

1. [Bug FIXED]
Symptom: ATA occur exception when switch ethernet setting from Static IP to Dynamic IP on SMT.
Condition:
2. [Bug FIXED]
Symptom: ATA set to Ethernet PPPoE mode cause continue Exception.
Condition:
3. [Bug FIXED]
Symptom: Phone LED keep blinking even after Phone was on-hook. Sometimes Phone LED is not blinking when ringing.
Condition:
4. [Bug FIXED]
Symptom: Use Soft restart, ATA will not change PWR/VoIP LED status. VoIP LED always show registered after soft restart.
Condition:
5. [Bug FIXED]
Symptom: eWC show incorrect default setting.
Condition:

Modifications in V 3.60(MD.0)a7 | April 22, 2004

1. [ENHANCEMENT]
Phone LED blinking when Ringing. The timer is 0.5s.

ZyXEL Confidential

2. [ENHANCEMENT]
FXS-SIP mapping. (Support CI Command only)
3. [ENHANCEMENT]
VLAN Tag support for SIP/Voice packet.
4. [ENHANCEMENT]
TOS setting SIP/Voice packet.
5. [ENHANCEMENT]
SIP Register/Unregister. (support CI Command/eWC)
[Bug FIXED]
Symptom: Short-term noise, voice disappearance, and system exception during voice communication.
Condition:
 1. Establish
 - 2 voice communication. Short-term noise occurs within 10 minutes. Voice disappearance occurs within an hour. System will crash for over-night voice communication

Modifications in V 3.60(MD.0)a6 | April 14, 2004

1. **[MODIFICATION]**
Update Model ID, after and from 3.60(MD.0)a6 can not use MD101.BM (Bootbase).
2. **[MODIFICATION]**
Cause the H/W design change, C3 and after H/W can not use F/W 3.60(MD.0)a1-a5 version (The phone can't be used).
3. [Bug FIXED]
Symptom: SLIC will cause system hang after phone ON/OFF hook continuous test. Single phone need long test time.
Condition:

POE Related Command

Command				Description
poe				
	status		[ch_name]	see poe status
	dial		<node>	dial a remote node
	drop		<node>	drop a pppoe call
	ether		[rfc 3com]	set /display pppoe ether type

PPTP Related Command

Command				Description
pptp				
	dial		<rn-name>	dial a remote node
	drop		<rn-name>	drop a remote node call
	tunnel		<tunnel id>	display pptp tunnel information

Configuration Related Command

Command					Description
config					The parameters of config are listed below.
edit	firewall	active <yes no>			Activate or deactivate the saved firewall settings
retrieve	firewall				Retrieve current saved firewall settings
save	firewall				Save the current firewall settings
display	firewall				Displays all the firewall settings
		set <set#>			Display current entries of a set configuration; including timeout values, name, default-permit, and number of rules in the set.
		set <set#>	rule <rule#>		Display current entries of a rule in a set.
		attack			Display all the attack alert settings in PNC
		e-mail			Display all the e-mail settings in PNC
		?			Display all the available sub commands
		e-mail	mail-server <mail server IP>		Edit the mail server IP to send the alert

ZyXEL Confidential

			return-addr <e-mail address>	Edit the mail address for returning an email alert
			e-mail-to <e-mail address>	Edit the mail address to send the alert
			policy <full hourly daily weekly>	Edit email schedule when log is full or per hour, day, week.
			day <sunday monday tuesday wednesday thursday friday saturday>	Edit the day to send the log when the email policy is set to Weekly
			hour <0~23>	Edit the hour to send the log when the email policy is set to daily or weekly
			minute <0~59>	Edit the minute to send to log when the email policy is set to daily or weekly
			Subject <mail subject>	Edit the email subject
		attack	send-alert <yes no>	Activate or deactivate the firewall DoS attacks notification emails
			block <yes no>	Yes: Block the traffic when exceeds the tcp-max-incomplete threshold
				No: Delete the oldest half-open session when exceeds the tcp-max-incomplete threshold
			block-minute <0~255>	Only valid when sets 'Block' to yes. The unit is minute
			minute-high <0~255>	The threshold to start to delete the old half-opened sessions to minute-low
			minute-low <0~255>	The threshold to stop deleting the old half-opened session
			max-incomplete- high <0~255>	The threshold to start to delete the old half-opened sessions to max-incomplete-low
			max-incomplete- low <0~255>	The threshold to stop deleting the half-opened session
			tcp-max-incompl ete <0~255>	The threshold to start executing the block field
		set <set#>	name <desired name>	Edit the name for a set
			default-permit <forward block>	Edit whether a packet is dropped or allowed when it does not match the default set
			icmp-timeout <seconds>	Edit the timeout for an idle ICMP session before it is terminated
			udp-idle-timeout <seconds>	Edit the timeout for an idle UDP session before it is terminated

ZyXEL Confidential

			<seconds>		is terminated
			connection-timeout <seconds>		Edit the wait time for the SYN TCP sessions before it is terminated
			fin-wait-timeout <seconds>		Edit the wait time for FIN in concluding a TCP session before it is terminated
			tcp-idle-timeout <seconds>		Edit the timeout for an idle TCP session before it is terminated
			pnc <yes no>		PNC is allowed when 'yes' is set even there is a rule to block PNC
			log <yes no>		Switch on/off sending the log for matching the default permit
			rule <rule#>	permit <forward block>	Edit whether a packet is dropped or allowed when it matches this rule
				active <yes no>	Edit whether a rule is enabled or not
				protocol <0~255>	Edit the protocol number for a rule. 1=ICMP, 6=TCP, 17=UDP...
				log <none match not-match both>	Sending a log for a rule when the packet none matches not match both the rule
				alert <yes no>	Activate or deactivate the notification when a DoS attack occurs or there is a violation of any alert settings. In case of such instances, the function will send an email to the SMTP destination address and log an alert.
				srcaddr-single <ip address>	Select and edit a source address of a packet which complies to this rule
				srcaddr-subnet <ip address> <subnet mask>	Select and edit a source address and subnet mask if a packet which complies to this rule.
				srcaddr-range <start ip address> <end ip address>	Select and edit a source address range of a packet which complies to this rule.
				destaddr-single <ip address>	Select and edit a destination address of a packet which complies to this rule
				destaddr-subnet <ip address> <subnet mask>	Select and edit a destination address and subnet mask if a packet which complies to this rule.
				destaddr-range <start ip address> <end ip address>	Select and edit a destination address range of a packet which complies to this rule.
				tcp destport-single <port#>	Select and edit the destination port of a packet which comply to this rule. For non-consecutive port numbers, the user may repeat this command line to enter the multiple port numbers.
				tcp destport-range <start port#> <end port#>	Select and edit a destination port range of a packet which comply to this rule.
				udp destport-single <port#>	Select and edit the destination port of a packet which comply to this rule. For non-consecutive

ZyXEL Confidential

					port numbers, users may repeat this command line to enter the multiple port numbers.
				udp destport-range <start port#> <end port#>	Select and edit a destination port range of a packet which comply to this rule.
				desport-custom <desired custom port name>	Type in the desired custom port name
delete	firewall	e-mail			Remove all email alert settings
		attack			Reset all alert settings to defaults
		set <set#>			Remove a specified set from the firewall configuration
		set <set#>	rule <rule#>		Remove a specified rule in a set from the firewall configuration
insert	firewall	e-mail			Insert email alert settings
		attack			Insert attack alert settings
		set <set#>			Insert a specified rule set to the firewall configuration
		set <set#>	rule <rule#>		Insert a specified rule in a set to the firewall configuration
cli					Display the choices of command list.
debug	<1 0>				Turn on/off trace for firewall debug information.

IP Related Command

Command				Description
ip				
	address		[addr]	display host ip address
	alias		<iface>	alias iface
	aliasdis		<0 1>	disable alias
	arp			
		status	<iface>	display ip arp status
	dhcp		<iface>	
		client		
			release	release DHCP client IP
			renew	renew DHCP client IP
		status	[option]	show dhcp status
	dns			

ZyXEL Confidential

		query		
		server	<primary> [secondary] [third]	set dns server
		stats		
			clear	clear dns statistics
			disp	display dns statistics
	httpd			
	icmp			
		status		display icmp statistic counter
		discovery	<iface> [on/off]	set icmp router discovery flag
	ifconfig		[iface] [ipaddr] [broadcast <addr> mtu <value> dynamic]	configure network interface
	ping		<hostid>	ping remote host
	route			
		status	[if]	display routing table
		add	<dest_addr default>[/<bits>] <gateway> [<metric>]	add route
		addiface	<dest_addr default>[/<bits>] <gateway> [<metric>]	add an entry to the routing table to iface
		addprivate	<dest_addr default>[/<bits>] <gateway> [<metric>]	add private route
		drop	<host addr> [/<bits>]	drop a route
	smtp			
	status			display ip statistic counters
	stroute			
		display	[rule # buf]	display rule index or detail message in rule.
		load	<rule #>	load static route rule in buffer
		save		save rule from buffer to spt.
		config		
			name <site name>	set name for static route.
			destination <dest addr>[/<bits>] <gateway> [<metric>]	set static route destination address and gateway.
			mask <IP subnet mask>	set static route subnet mask.
			gateway <IP address>	set static route gateway address.
			metric <metric #>	set static route metric number.

ZyXEL Confidential

			private <yes no>	set private mode.
			active <yes no>	set static route rule enable or disable.
	traceroute		<host> [ttl] [wait] [queries]	send probes to trace route of a remote host
	xparent			
		join	<iface1> [<iface2>]	join iface2 to iface1 group
		break	<iface>	break iface to leave ipxparent group
	ave			anti-virus enforce
	urlfilter			
		reginfo		
			display	display urlfilter registration information
			name	set urlfilter registration name
			eMail <size>	set urlfilter registration email addr
			country <size>	set urlfilter registration country
			clearAll	clear urlfilter register information
		category		
			display	display urlfilter category
			webFeature [block/nonblock] [activex/java/cookei/webproxy]	block or unblock webfeature
			logAndBlock [log/logAndBlock]	set log only or log and block
			blockCategory [block/nonblock] [all/type(1-14)]	block or unblock type
			timeOfDay [always/hh:mm] [hh:mm]	set block time
			clearAll	clear all category information
		listUpdate		
			display	display listupdate status
			actionFlags [yes/no]	set listupdate or not
			scheduleFlag [pending]	set schedule flag
			dayFlag [pending]	set day flag
			time [pending]	set time
			clearAll	clear all listupdate information
		exemptZone		
			display	display exemptzone information

ZyXEL Confidential

			actionFlags [type(1-3)][enable/disable]	set action flags
			add [ip1] [ip2]	add exempt range
			delete [ip1] [ip2]	delete exempt range
			clearAll	clear exemptzone information
		customize		
			display	display customize action flags
			logFlags [type(1-3)][enable/disable]	set log flags
			add [string] [trust/untrust/keyword]	add url string
			delete [string] [trust/untrust/keyword]	delete url string
			clearAll	clear all information
		logDisplay		display cyber log
		ftplist		update cyber list data
		listServerIP	<ipaddr>	set list server ip
		listServerName	<name>	set list server name
	tredir			
		failcount	<count>	set tredir failcount
		partner	<ipaddr>	set tredir partner
		target	<ipaddr>	set tredir target
		timeout	<timeout>	set tredir timeout
		checktime	<period>	set tredir checktime
		active	<on/off>	set tredir active
		save		save tredir information
		disp		display tredir information
		debug	<value>	set tredir debug value
	nat			
		server		
			disp	display nat server table
			load <set id>	load nat server information from ROM
			save	save nat server information to ROM
			clear <set id>	clear nat server information
			edit active <yes/no>	set nat server edit active flag

ZyXEL Confidential

			edit svrport <start port> [end port]	set nat server server port
			edit intport <start port> [end port]	set nat server forward port
			edit remotehost <start ip> [end ip]	set nat server remote host ip
			edit leasetime [time]	set nat server lease time
			edit rulename [name]	set nat server rule name
			edit forwardip [ip]	set nat server server ip
			edit protocol [protocol id]	set nat server protocol
			edit clear	clear one rule in the set
		service		
			irc [on/off]	turn on/off irc flag
		resetport		reset all nat server table entries
		incikeport	[on/off]	turn on/off increase ike port flag
	igmp			
		debug	[level]	set igmp debug level
		forwardall	[on/off]	turn on/off igmp forward to all interfaces flag
		querier	[on/off]	turn on/off igmp stop query flag
		iface		
			<iface> grouptm <timeout>	set igmp group timeout
			<iface> interval <interval>	set igmp query interval
			<iface> join <group>	join a group on iface
			<iface> leave <group>	leave a group on iface
			<iface> query	send query on iface
			<iface> rsptime [time]	set igmp response time
			<iface> start	turn on of igmp on iface
			<iface> stop	turn off of igmp on iface
			<iface> ttl <threshold>	set ttl threshold
			<iface> v1compat [on/off]	turn on/off v1compat on iface
		robustness	<num>	set igmp robustness variable
		status		dump igmp status
	pr

Voice Related Command

Command					Description
voice					
config					
	rtp				
		index		<index>	Select RTP index.
		sortingbuffer		<index> <0:0ms 1:10ms 2:20ms>	Disable or enable receive sorting buffer(default 0 ms)
		rtcpinterval		<index> <ms>	Change the RTCP transmission interval(default 15000)
		packetsize		<index>g711<0:10ms 1:20ms 2:30ms>g729<0:10ms 1:20ms 2:30ms>	Change the transmit packetized period(default 10ms)
		save		<index>	Save the configured value
		display		<index>	Display the configured value.
		dumpCfg			Display working buffer value.
		free			Free working buffer.
	pstn				
		index		<index>	Select the PSTN index
		phonebook		<index> <0~32 digits/blank>	Signaling the phone number
		prefixcode		<index> <1:enable 0:disable>	Disable or enable the prefix code
		active		<index> <1:active 0:in-active>	Disable or enable the speed dial

ZyXEL Confidential

		save		<index>	Save the configured value
		display			Display the configured value.
		dumpCfg		<index>	Display working buffer value.
		free			Free working buffer.
	signal				
		active		<index> <1:active 0:in-active>	Active/in-active this setting.
		index		<index>	Select SIP index.
		register		<index> <auto enter exit>	Change the registrar type
		registertimeout		<index> <second>	Setup registration timeout value. (default 3600 sec)
		registerresendtime		<index> <second>	Setup registration resend timeout value.
		minse		<index> <100-1800 second>	Setup minimum session timeout value.
		retransmitT2		<index> <4 8 16 32sec>	Not support yet
		sessiontimeout		<index> <100-3600 second>	Setup session timeout value(default 300 sec)
		serveraddress		<index> <ip address>	Signaling server address
		serverport		<index> <1024-65535>	Signaling server port (default 5060)
		registeraddress		<index> <ip address>	Signaling register address
		registerport		<index> <1024-65535>	Signaling register port(default 5060)
		userid		<index> <0-20 chars>	Signaling SIP user-id
		password		<index> <0-20 chars>	Signaling SIP password
		urltype		<index> <sip tel>	SIP URL type
		port		<index> <1024-65535>	Signaling port
		phonenumber		<index> <0-32 chars>	Signaling phone number
		domain		<index> <1-128 chars>	Setup domain of SIP service
		dtmf		<index> <rfc2833 pcm sipinfo>	Setup DTMF key type.
		pri_compression		<index> <0:G711mu 8:G711A 18:G729>	Change the primary compression type
		sec_compression		<index> <0:G711mu 8:G711A 18:G729>	Change the secondary compression type
		portrange		<index> <start port> <end port> (49152~65534)	RTP/RTCP port range setting

ZyXEL Confidential

		transport		<index> <udp tcp>	Setup SIP transport type.
		callerid		<index> <disable enable>	Disable or enable the caller id feature for VoIP.
		autoredialpstn		<index> <disable enable>	Disable or enable the auto redial
		phoneselect		<index><phone port 0:All><0:No 1:Yes>	Setup incoming call mapping to phone port.
		vlantag		<index> <disable enable>	Enable/disable VLAN Tag in VoIP packet.
		tpid_vlantag		<index> <TPID value (4 Byte)>	Setup VLAN Tag - TPID.
		vid_vlantag		<index> <VID value (3 Byte)>	Setup VLAN Tag - VID.
		priority_vlantag		<index> <TCI value (0-7)>	Setup VLAN Tag - TCI.
		diffservrtp		<index> <0-7>	Setup DiffServRtp for QoS.
		diffservsip		<index> <0-7>	Setup DiffServSip for QoS.
		stunactive		<index> <0:off 1:on>	Active/in-active STUN service.
		stunservaddr		<index> <ip address>	Setup STUN server IP Address.
		stunservport		<index> <port>	Setup STUN server port number.
		mwiaactive		<index> <0:off 1:on>	Disable or enable the voice message
		save		<index>	Save the configured value
		display		<index>	Display the configured value.
		dumpCfg			Display working buffer value.
		free			Free working buffer.
	dsp				
		index		<index>	Select DSP index.
		echocancellation		<index> <enable disable>	Disable or enable the echo cancellation
		jittersize		<index> <0~90>ms	Change the jitter buffer size for DSP
		start		<index> <loop ground>	Change the pots type.
		vad		<index> <enable disable>	Disable or enable the VAD
		dialtype		<index> <pstn tone pulse>	Change the dialing type
		dialtonetype		<index> <ntt:pdt>	Change the dial tone type
		dialinterval		<index> <3~5>	Change the dialing interval
		flashinterval		<index> <1:1.2sec 2:2.2sec>	Change the flash key interval
