**Date: May 21, 2001**

### ***Support Platforms:***

---

ZyXEL Prestige firmware V3.24(WA0) Firewall supports the P312/ZyWALL 10 two-LAN router hardware.

### ***Version:***

---

ZyNOS F/W Version: V3.24(WA.0)

### ***Bug fixed :***

---

Change the content filter register server address and domain main.  
Fix content filter "URL Keyword configuration error"  
Firmware wrong version number  
Add SMTP parser support "BDAT" command  
Fix bug system crash when trying to add more than 1 subnet on the firewall rules. This includes "Local Network" and "Internet" rules on both source and destination IP.  
Fix content filter "Enable URL keyword blocking" cannot save  
Fix SMTP parser for Exchange server support  
Bug fix on Firewall SMTP protocol parser  
Bug fix on telnet client not sending terminal type  
Bug fix on Content filter web configuration error  
Content Filter List cannot save to Flash  
Content Filter makes all HTTP connection Fail  
Content Filter: If we didn't registry and going to download Filter List, "Status" must show error message, not show "Write to Prestige router successfully".  
In "URL KEYWORD" page, when we "Add Keyword" it write to ROM, so Apply is useless.  
Can't use web set CATEGORIES, if we enable some categories and push Apply button, status will show "Write to Prestige router successfully", we refresh this page, the check box was clear.  
Block all categories then clear all categories, but we refresh web, "Intolerance" still enable.  
Content Filter Category cannot be configured problem  
Content Filter Packet block by Firewall  
Send Content Filter log by e-mail failure  
Firewall syslog empty string fix  
eWeb timeout problem fixed  
pptp firewall pass through problem fixed  
Firewall SMTP parser bug fix  
NAT checksum bug fix  
eWeb make system hang fix

### ***New Feature:***

---

Add ci command to change different Content filter List server.  
Add ci command "sys firewall dos smtp on" to turn on SMTP defender  
Add ci command "sys firewall dos smtp off" to turn on SMTP defender  
Add ci command "sys firewall dos display" to display the smtp defender status.  
Add Netbios over TCP NAT support  
DHCP relay  
Add NAT Net2Phone support  
Content Filter log send to syslog  
MSN Firewall support  
Parent control support  
MSN NAT support  
Login Password security support
