### Abstract

My topic include:

1. Economical, political, social and geographical situation of Phu Dong village - the urgent problems.
2. The gender equality of Phu Dong village.
3. The science-technology solutions
4. Policy
5. The result
6. Generating some the problems after transforming the structure.
7. Several issue must be solved: production, capital, environment.

Viet Nam is agriculture country, most of Vietnamese people (about 80%) live in the countryside and the main job is to cultivate and breed, in which the women occupies 3/4 of population. Due to many causes, they have been living in the poor and hard condition, so the person who must suffer the consequence (especially disease), is the women. How do we do to help them to improve their life, it is the target of Vietnamese government.

Phu Dong village ( belong Gia Lam district, Ha Noi) is the outskirts of Ha Noi, it is far from Ha Noi about 17 km, lying in river Duong, containing 12 000 people, their average income is low. With this amount, the household only spend for the necessary demand. It is difficult for many families having 2 childrens who they have been going to school. Our aim is to help the women to improve the structure (from cultivation to breeding the milk cow). We will provide and guideline the knowledge to plan grass “voi”, breed method, process milk and preserve milk.

At present, the average income of several families have increases from 10 000 000 VND to 20 000 000 VND/ year. They can pay school fees for their children and equip many goods for their family (television, motorcycle...). It leads to their consumption to be increased and the market is opened up.
