**Abstract**

Perhutani is the forest state corporation that manage mainly the teak forest on Java. It was about more than one century that sustainably managed. In recent years, due to the social-economic crisis in Indonesia, many jobless people came back to their village to provoke their colleagues to take illegal logging roughly. Perhutani has no power to control it.

It involves many aspects, not only from the hunger people but also as the fustate image of the people through illegal logging on out side Java island, and no law enforcement.

In the future concept Perhutani builds the collaboration with the stake holders to manage the forest. It is changed a paradigm from timber management to forest resource management. Until now no signs for the people to stop their illegal logging. Many new timber industries are rosen. The big demand to the teak log makes difficult management in the field.

A deep strategy has to be made to meet with the problem. The idea is how to save the forest, to make the benefit, and to share with the people.
